Art Unit: 3723

#### **DETAILED ACTION**

## **Drawings**

1. Figures (5A) and (5B) should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.121(d)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

## Claim Objections

2. Claims 1-6 are objected to because of the following informalities: regarding claims 1 and 2, line 2, "for guiding a movable member (spindle head) for..." should be changed to, -- for guiding a movable member (spindle head) and for...-- Appropriate correction is required.

## Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-6 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Applicant's Prior Art (AAPA).

Marching tools As admitted by Applicant, e.g., Figs. 5A and 5B, discloses all of the limitations of claims 1 and 2, i.e., a hydrostatic slideway for guiding a spindle head comprising

Application/Control Number: 10/689,079

Art Unit: 3723

opposed slideways between which pressurized fluid is supplied and a pocket (on the slide guide 68), meeting the claims limitations as recited in an apparatus claim, however, in the alternative, the prior tool as disclosed does not indicate pressurizing the head at varied rate according to the movement of the head. Control means, e.g., controllers to set the feed rate of a grinding tool by varying hydraulic pressure actuating the movement of the head are known in the art, which would vary the advancement per a reference point (e.g., surface to be machined), therefore, modifying the marching tool of prior art by controlling the feed movement by a controller in automating the apparatus, would be a modification well within the knowledge of one ordinary skill in the art.

Regarding the linear, non-linear...application of pressure, the machine tool as describe above is "capable" of meeting the narrative and/or functional language, and therefor it is considered the apparatus of prior art meets the claims as recited, however it is also indicated that it would have been obvious to one having ordinary skill in the art at the time the invention was made to vary the pressure at different rate, e.g., nonlinear... dependent on work-piece and/or operational parameters which would involve only routine skill in the art.

It is noted that the functional/narrative language as recited in these claims, does not further limit the tool as claimed, since no structure and/or structural limitations result from the language. It is noted that in order for a functional language to be given patentable weight, a function recitation must be expressed as a "means" for performing the specified function, as set forth in 35 USC § 112, 6<sup>th</sup> paragraph, and must be supported by recitation in the claim of sufficient structure to warrant the presence of the functional language. *In re Fuller, 1929 C.D.* 172; 388 O.G. 279.

Application/Control Number: 10/689,079

Art Unit: 3723

It is further noted that although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims (e.g., independent pocket 23a). See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

### Conclusion

5. Prior art made of record and not relied upon are considered pertinent to applicant's disclosure. Ball, Shimbara, Matsuyama et al. and Matson are cited to show related inventions.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hadi Shakeri whose telephone number is (571) 272-4495. The examiner can normally be reached on Monday-Thursday.

The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
